SUMMARY

Full-stack developer skilled in Python, FastAPI, PostgreSQL, REST APIs, and React. Builds secure backends with OAuth 2.0, TOTP, and encrypted data storage. Creates automation pipelines, offline RAG applications, and open-source CLI tools. Published PyPI package author and active open-source contributor.

EXPERIENCE

Full-Stack Trainee

Nimblechapps — Web Development Agency · Oct 2025 – Present · nimblechapps.com

- Studied **PostgreSQL** database design and **REST API** development using **FastAPI** through guided tasks and code exercises — covering table relationships, query patterns, and endpoint structure.
- Practised backend concepts including **token-based authentication**, **input validation** with Pydantic, and **rate-limited API routes** through hands-on tasks and observations under mentor guidance.
- Gained exposure to full project delivery phases — requirements, design, build, and staging — by observing and participating in agency workflows including version control and code reviews.

SKILLS

Languages: Python, JavaScript, TypeScript, Bash, SQL

Backend & APIs: FastAPI, Pydantic v2, REST APIs, OAuth 2.0, TOTP, Fernet (AES-128), PostgreSQL

Automation: GitHub Actions, CI/CD pipelines, Sphinx, sphinx-autoapi, interrogate, Git

AI & ML: Ollama, RAG pipelines, Streamlit, AST parsing, Mermaid.js

Frontend: React, Next.js

Security: Penetration testing, vulnerability scanning, secure API design

PROJECTS

AutoCodeDoc | [GitHub](#) · [Live Docs](#) 2025 – Present

Stack: Python · Sphinx · sphinx-autoapi · interrogate · GitHub Actions · Mermaid.js · FastAPI · Pydantic v2

- Built a documentation automation system using **AST parsing** — converts any Python codebase to a live, **CI/CD-deployed** API reference from docstrings; self-updating architecture diagrams regenerate on every push. 0 lines of Markdown by hand.
- Designed a **GitHub Actions** pipeline with **sphinx-build -W** blocking broken docs from production; **interrogate** posts docstring coverage % to PRs as a non-blocking comment.

DriveGate | [GitHub](#) · [Live](#) 2025

Stack: Next.js 16 · React 19 · FastAPI · PostgreSQL · Google OAuth 2.0 · TOTP · Fernet (AES-128)

- Constructed a secure file-sharing platform applying **TOTP**, **OAuth 2.0**, and **AES-128 encryption** — signed Google Drive URLs offload 100% of file-transfer bandwidth from the server.
- **Pydantic v2** schema validation defends all endpoints against SQLi and XSS; sensitive **PostgreSQL** records (OAuth tokens, TOTP secrets) encrypted at rest.

RAGForge | [GitHub](#) · [Live](#) 2025

Stack: Python · Streamlit · Ollama · RAG · local LLM inference · vector store

- Developed a fully offline **RAG** app using **Ollama** for local **LLM inference** — users upload PDFs and chat via Streamlit; 0 cloud API calls, 0 data egress, fully private document Q&A.;
- **Semantic chunking** and **vector indexing** maintain retrieval accuracy on domain-specific documents the base model was never trained on.

OPEN SOURCE

- **FolderArchaeologist** [GitHub](#) · [PyPI](#) — Published **Python package** (pip install FolderArchaeologist) at GitHub's Love of Code; CLI scanning directory trees, detecting duplicates, surfacing stale folders — integrates as a CI/CD storage-hygiene step.
- **NullProtocol** [GitHub](#) · [Live](#) — Open-source **Linux** cybersecurity toolkit; recon, enumeration, and exploitation in one **automated CLI pipeline** — HTML/JSON reporting cuts post-assessment write-up time by ~80%.

EDUCATION

Lok Jagrut Kaushalya University (LJKU) Ongoing — B.Tech, Computer Science and Engineering Aug 2025 – Aug 2028 · Ahmedabad, Gujarat

R.C.T.I — Diploma in Computer Engineering Oct 2022 – Mar 2025 · Ahmedabad, Gujarat
